Assignment 7: Sample Data Insertion

Institution	Alliance University
Project	Rapido – Bike & Cab Booking System
Student	Tamajong Bless Ntumnyoh
USN / Roll No.	2511021240069
Programme	BCA Semester 3 (2025)
Course	Database Management Systems
File name	Assignment_7_Sample_Data_Insertion.pdf

1. Objective

Load realistic Rapido sample data that respects every constraint: eight riders, six vehicles and captains, five Bengaluru zones, twelve captain–zone assignments, fifteen rides (requested, ongoing, completed, cancelled) and eleven payment records including one failed UPI attempt.

2. INSERT script

```
USE rapido_db; INSERT INTO users (full_name, phone_number, email, created_at) VALUES ('Arjun
Mehta', '9876500001', 'arjun.mehta@gmail.com', '2026-01-12 09:15:00'), ('Priya Sharma',

5. How the data follows constraints and relationships

- Every captains.vehicle_id matches a vehicles row (1–6).
- Every rides.user_id is in 1–8 and every rides.captain_id is in 1–6.
- Ride statuses use only the CHECK list; cancelled ride 9 and ongoing rides 7 and 15 have no success payment, which matches real operations.
- payments.ride_id values are unique and point at existing rides. Ride 13 is completed but its payment is Failed, which is allowed and useful for later reports.

- Fares are non-negative; ratings are between 4.20 and 4.80; vehicle types are only Bike, Auto or Cab.
- Pickup and drop names reuse the zone vocabulary so later joins stay meaningful.
